1 ½ Yard	\$ 260	\$ 260
1 ¾ Yard	\$ 300	\$ 300
2 Yard	\$ 330	\$ 330

Our high-tech concrete blending system is capable of producing up to 20 yards of ready-mixed concrete per hour. Using your tow vehicle, take one of our tandem-axle carts and from ¼ yard to 1¼ yard up to about 10 miles, back up to your form, and using the built-in hydraulic jack, place concrete right where you need it. No more backbreaking bags of sack concrete! Most people don't realize that mixing just one yard of concrete by hand in a wheelbarrow or a small mixer requires OVER 40 bags of sack concrete! Folks, life is too short for that kind of labor, when you can have the finished product for less money than the cost of the sack concrete.

Our concrete is made with premium-quality Portland type II cement and a premixed sand and gravel aggregate. The blending system injects an air-entraining agent that traps air bubbles in the mix, increasing travel time by helping to slow the natural settling of the rock during the towing process. The prices shown are for a 6-bag mix, which will produce a concrete, which if properly placed and finished, is more than adequate for patios, sidewalks, etc. We can easily increase the cement content at an additional cost; some customers request 7-bag mix for additional strength or wet area applications.

We recommend at least a 3/4 -ton pickup for towing; a receiver hitch rated for 6500 pounds with a 2" ball is excellent, as a trailer with a full load (1 yard) weighs over two and a half tons. Maximum towing speed is 35 mph due to the weight involved. You should have all site preparation done before coming to get concrete - it is best to dump the concrete immediately on arrival at the jobsite, especially in hot weather.

Our mixing hours start half hour after opening and end an hour before closing; they are shorter than regular business hours due to startup and cleanup requirements of the blending system. We do not reserve trailers or accept advance payments for concrete. Due to high volume, we require trailers to be returned within three hours per batch. If you take concrete within 3 hours of closing, it may be acceptable to return trailer the next business morning - check with our staff.

Regular trailers are \$20 per 3-hour rental with the sale of concrete. Trailer must be returned within 3 hours of departure per batch hauled.

All trailers are for hauling concrete purchased at ABC Rental Center Rosedale only; no other use is authorized. A \$100 cleanup deposit is required on each trailer rented regardless of type; deposit will be refunded if trailer is returned on time and has been rinsed inside and out.

Consider using **U-CART** Concrete for your next concrete job, if:

1. You need more than a few bags of sack concrete
2. You need less than an eight or nine yard truckload
3. You don't have enough help to handle eight or nine yards at once
4. You have a problem getting a truck into your jobsite

We've sold thousands of yards since 1978, one yard at a time. We KNOW this is a good product. Try it!
NOTE: The final strength of this product is dependent on several factors including cement content, type of reinforcement used (wire mesh, rebar), quality of site preparation (soil compaction, wetness, etc.), and skill in placing and finishing the concrete. In some cases this product is simply not suitable due to the fact that a large aggregate (rock) is not used in mixing. Because of the many variables that come into play, some of them outside our control, ABC Rental Center Rosedale cannot guarantee the suitability of this product to a particular task, and will not be liable for consequential damages or lost labor or materials.
